

This important volume provides an original synthesis and novel overview of Antarctic fish biology, detailing the evolution of these fish in some of the most unusual and extreme environments in the world. Focusing on one group of fish, the notothenioids, which contain the majority of the current organismal diversity, this book describes a fauna that has evolved in isolation and experienced incredible adaptive radiation by acquiring numerous physiological specializations. Darwin's finches and African cichlids may be joined by Antarctic fishes as exemplars of adaptive radiation. The book's coverage is detailed and comprehensive, and the author clearly recognizes the fact that these fish are a component of a most interesting and biologically unique ecosystem and environment. Topics in Antarctic Fish Biology include past and present environments, fossil records, taxonomic composition of fauna, systematic relationships, diversification, and physiological adaptations.

Thermodynamic Properties: Gasprops, Refrig, Steamcalc, Sins of a Wicked Duke (Penwich School for Virtuous Girls Book 1), Medieval Lays and Legends of Marie de France (Xist Classics), Endocrine, Metabolic and Immunologic Functions of Keratinocytes (Annals of the New York Academy of Sciences), The Well, The complete herbal guide to natural health and beauty,

Antarctic fish biology: Evolution in a unique environment. by Joseph T. Eastman Academic Press, \$ hbk (xiii + pages) ISBN 0 12 3.
