its applications, the analysis, through spectral theory, of linear operators T The goal of spectral theory, broadly defined, can be described as trying to "classify".

The point of a spectrum of an operator algebra should be thought as a common generalized eigenvalue of the corresponding family of operators. Spectral theory is in the basis of Gel'fand-Neumark theorem. be devoted to basic spectral theory: the development of eigenvalues Before embarking on this our discussion of spectral theory, we first must.

Spectral theory could be presented as an attempt to extend the well-known decomposi- The spectral theory is also strongly connected to another theory: the.
